IMPORTANT NOTICE FROM YOUR WATER COMPANY

Golden State Water Company is constructing an important project that affects your property or residence in the City of Cypress and will require assistance from the property owners to coordinate private plumbing work required to complete the project.

Golden State Water Company (GSWC) is proposing to abandon approximately 5,800 L.F. of existing 4-inch water main currently located in customer's backyards on Sumner Pl., Belmont St. and La Salle St. as shown in the enclosed exhibit. In order to properly abandon the existing mains and maintain water service to our customers, all existing water meter box assemblies currently located in the backyards will be relocated to the public right of way, behind existing curb and gutter in front of customers' properties. **The project also includes installation of new customer house lines from the new/existing water meter box assemblies in the front of the properties to the existing customer's service connections in the backyards, with removal of existing meter box assemblies from the backyard locations.** This work will be done with minimal interruptions to your service and is necessary to abandon the existing pipelines and re-establish services to the mains in public right of way. Restoration of any private improvements that are disturbed and/or damaged during installation of new house lines will be performed by the contractor under close inspection by GSWC and coordination with the property owner. The construction is scheduled to commence in early April, 2021 and is anticipated for completion by end of September, 2021.

The primary purpose of this letter is to notify each property **owner and occupant** that this construction project includes plumbing work on your property that will be paid for by GSWC. Golden State Water Company is reaching out at this time to inform property owners and their residents about the installation of this private plumbing work, which is necessary to re-establish

service to your property from the existing pipelines in the streets right of way and improved distribution system.

Kindly, please contact GSWC Construction Inspector Mr. Jose Rivera at (714) 264-5018 by March 19, 2021, if you have any questions or would like to set up a date and time to discuss the details of the private plumbing installation. Alternatively, you may contact our Project Engineer Long Thai at (714) 296-4319 for more details.

Golden State Water Company thanks you in advance for your assistance in completing this work and improving service reliability to your community.
